

Encore®

Cup Gun Kit

Cup gun kit combines fast, efficient testing of various powders with the unmatched performance and control of Nordson's Encore® gun.

In its cup gun configuration, the Encore manual gun achieves the unmatched transfer efficiency, part coverage and cured-finish results matching that of a production Encore system spraying from a more typical capacity hopper or vibratory box feeder.

Ideal for laboratory testing and field test trials

Designed specifically for efficient, small-scale testing with results that correlate to production coating operations, the Encore cup gun kit is ideal for evaluating new powder formulation types and colors by powder manufacturers and end users.

The Encore cup gun kit's "optimum powder test" capacity along with its plug-and-play design perfectly complement the Encore gun's other production-proven features and performance benefits, allowing operators to focus solely on the coating task. These include:

- On-Gun controls and display
- 20 user-programmable electrostatic and pneumatic presets
- Patented Select Charge® technology
- One-hand powder flow adjustment or preset selection
- Highest first-pass transfer efficiency
- Through-the-handle purge cleaning

The cup gun kit itself also features:

- Encore inline pump
- 14-ounce capacity cup
- Easy clean-up for fast powder changeover
- Optional cups with lids for powder storage for even faster changeover or subsequent testing
